

Custom Training

Are you getting everything you can out of your Sonoscan equipment?

Are you interested in advanced features and analysis techniques?

Do you have new personnel or new applications?

Expand and refine your Acoustic Micro Imaging (AMI) skills by learning from the world's foremost experts.

With Custom Training you will...

- Discover new tips and techniques
- Train new staff or refresh experienced staff
- Improve data and image interpretation skills
- Increase speed and efficiency
- Optimize results for various package types and applications
- Learn advanced inspection methods for your specific situation

Learn How to Fully Utilize These and Other Advanced Features:

- Perform a complete analysis of a sample, even after it is no longer available, with Virtual Rescanning Mode™
- Set accurate, automatic accept/reject analysis with the Digital Image Analyzer™
- Maximize depth analysis capabilities through the Quantitative B-Scan Analysis Mode™
- Automate routine analyses using Libraries and AutoScan™
- Efficiently evaluate components in fewer scans using STaR™
- Document settings and results for records, training or reports using waveform and image functions

Maximize your capabilities!

Sonoscan will develop a custom program based on your needs and objectives with training conducted at your location or at a SonoLab™ facility near you.

Call or e-mail us for a free, no-obligation needs analysis and custom program recommendation.
